Koch M., Bohrmann B., Matthison M., Hagios C., Trueb B., Chiquet "Large and small splice variants of collagen XII: differential expression and ligand binding.", J. Cell Biol. 130:1005-1014(1995).

-I- FUNCTION: Type XII collagen interacts with type I collagen-containing fibrils, the COL1 domain could be associated with surface of the fibrils, and the COL2 and NC3 domains may be localized in the perifibrilar matrix.

-I- SUBUNIT: Trimer of identical chains each containing 190 kDa o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Trueb J., "The two Biochim.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IsoId=P13944-2; Sequence=VSP 001148; TISSUE SPECIFICITY: Type XII collagen is present in tendons ligaments, perichondrium, and periosteum, all dense connect tissues containing type I collagen.

DOMAIN: This sequence defines five distinct domains, two trhelical domains (COL1 and COL2) and three nontriple-helical domains (NC1, NC2, and NC3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. PTM: O-glycosylated; glycosaminoglycan of chondroitin-sulfate to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PTM:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Event=Alternative splicing; Named isoforms=2;
Comment=The final tissue form of collagen XII may co
homotrimers of either isoform Long or isoform Short
combination of isoform Long and isoform Short. Only
is a proteoglycan. Isoform Long has more restricted
in embryonic tissue than isoform Short;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Name=Short;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Name=Long

TISSUE SPECIFICITY: Found in collagen I-containing tissues: both isoform Short and isoform Long appear in amnion, chorion, skeletal muscle, small intestine, and in cell culture of dermal fibroblasts, keratinocytes and endothelial cells. Only the short isoform is found in lung, placenta, kidney and a squamous cell
                                                                                                                                           Event=Alternative splicing, Named isoforms=2;
Comment=The final tissue form of collagen XII may contain
homotrimers of either isoform Long or isoform Short or an
combination of isoform Long and isoform Short;
                                                                                                                                                                                                             localized in the perifibrillar matrix (By similarity) SUBUNIT: Trimer of identical chains each containing 1
                                                                                                                                                                                                                                 FUNCTION: Type XII collagen interacts with type I collagen-containing fibrils, the COL1 domain could be associated with surface of the fibrils, and the COL2 and NC3 domains may be
                                                                                                             Name=Short
                                                                                                                                                                                        nontriple-helical sequences.

The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human VA domain New isolated Willebrand Factor A-Related Protein polypeptide useful for the manufacture of a medicament in the treatment of a disease condition of the extracellular matrix, in particular arthritis. Claim 7; Page 72-73; 103pp; English. N-PSDB; 2003-111873/10. DB; AAD50397.

Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers.

Claim 11; Page 532-533; 607pp; English.

CC AAB971858-AAF91929 represent cDNAs corresponding to 52 human secreted CC protein genes, and AAB8742-AAB87411 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes can their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating the protein in a sample or by determining the protein of the creating of the mean protein in a sample or by determining the presence of creating the discorders, can described for each of the creating of the mutations in the new genes. Specific uses are described for each of the creating discorders, cancer, tumours, foetal and developmental creating discorders, schizophrenia, asthma, skin creating cancer, tumours, foetal and developmental creating discorders, schizophrenia, asthma, skin creating and epithelial cell proliferation, to prevent skin aging due to consist and developmental cell proliferation, to prevent skin aging due to consist and developmental cell proliferation, to prevent skin aging due to consist a load and can be used in discorders specific for a protein of the invention can be used in alleviating symptoms associated with the discorders mentioned above, and can be used can be used can decordered protein of the invention can be used in munosorbent assay (ELISA). The present sequence represents a human created protein of the invention

The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                   The invention relates to a novel albumin fusion protein. The invention CC further relates to: a composition comprising the albumin fusion protein CC and a pharmaceutical carrier; a kit comprising the composition of the CC albumin fusion protein formula; a method of treating a disease or CC disorder in a patient comprising the steep of administering the albumin CC fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; CC fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; and a host cell CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The cCC comprision protein and its compositions have the following CCC dermatological, antipout, immunomodulator, antiarrhythmic, CCC dermatological, antipout, immunomodulator, antiarrhythmic, CCC cardiant, nootropic, antilipaemic, nephrotropic, uropathic, anabolic, antiparkinsonian, tranquilizer, antidiabetic, anabolic, and transport to antiparking fusion protein antiarrhythmic and uniterary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              JLT 4

CC AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted CC protein genes, and AAB87342-AAB87413 represent the proteins they encode. CC AAB87414-AAB87454 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the C2 genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, disease of the immune system, CC parkinsons's diseases (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC gastrointestinal disorders, pregnancy-related disorders, abcorders, endocrine CC disorders, and epithelial cell proliferation, for supporting due to sunburn, to maintain organs before transplantation, for supporting cell cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC cantibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; ALDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; gendocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.

                                                                                                                                                                                                               Percent Similarity:
                                                                                                                                                                                                                                                                                                                                  CC AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. CC AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene ct therapy. Pathological conditions can be diagnosed by determining the genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of the can banormalities, haematopoietic disorders, diseases of the immune system, can be diagnosis or treatment of can banormalities, haematopoietic disorders, diseases of the immune system, callergies, neurological disorders (e.g., Alzheimer's disease, cardiovascular disorders, capitive disorders, schizophrenia, asthma, skin cd disorders (e.g., provinsis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, pregnancy-related disorders, endocrine cd disorders, and epithelial cell proliferation, to prevent skin aging due to cardiovascular disorders, pregnancy-related disorders, endocrine cd disorders, and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their counters of primary tissues, to regenerate tissues, to identify their counters and additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in disgnostic immunoassays e.g., radioimmunoassay erepreties a human cc secreted protein fragment referred to in the discorders a human cc secreted protein fragment referred to in the discorder of the invention
                                                                                                                                                                                               Local Similarity:
                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 18; 607pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc therapy. The polynucleotide sequences can be used in gene ct therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The collapse them and in assays to identify modulators (agonists and collapse) of expression and activity. The antibodies and station of secretory the answers of each attain and activity. The antibodies are attivity. The antibodies may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme clinked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 285 AA;

                                                                                                                                                                                                                                                                                                                                                                                                    membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.

WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human WARP protein

                                                                                                                                                                                                                                                                                                                                                                                                                          mucleotide sequence selected from any of 948 sequences (ABZIII9)

CA ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for cidentifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68992-ABP69849) are useful as molecular weight comarkers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-complificative disorders (cancer), neurodegenerative diseases (Parkinson's complificative disorders (cancer), neurodegenerative diseases (Parkinson's complification disorders, myeloid or lymphoid disorders, liver complities, infections (bacterial, viral, fungal, parasitic), complities, etc. Note: The sequence data for this patent did not form part compliance of the printed specification, but was obtained in electronic format complex contents.

The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the generication. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence

New human extracellular matrix and cell adhesion molecules and polynucleotide sequences encoding them, useful for diagnosis, prevention, treatment of genetic, autoimmune and cell proliferative disorders.

Claim 1; Page 111; 135pp; English

cc polynucleotides encoding XMAD are useful in somatic or germline gene therapy to correct a genetic deficiency, to express a conditionally clethal gene product and to express a protein which affords protection against intracellular parasites and also for diagnosis of disorders cassociated with expression of XMAD. They are also used for generating hybridisation probes useful in mapping the naturally occurring genomic sequences and to create knock in humanised animals (pigs) or transgenic animals (mice or rats) to model human diseases. Oligonucleotide or longer fragments derived from the polynucleotide sequences may be used as celements on a microarray. Antibodies which specifically bind XMAD may be used for the diagnosis of disorders associated with the expression of CC windows of the polynucleotide genetic disorders such as addinated prevented or treated include genetic disorders such as addinated in prevented in the specifically bind XMAD. Diseases colleges, myotonic dystrophy, sickle cell anaemia, thalassaemia, attender, antipolical disports affords a argenia attended the control of the control of the control of the control of the colleges and the colleges argenia attended the colleges and the colleges argenia attended the colleges and the colleges argenia attended the col The present sequence is a human extracellular matrix and cell adhesion molecule (XMAD). The XMAD is used for screening a compound for effectiveness as an agonist or antagonist of XMAD. The identified agonior antagoinst are used for treating a disease or condition associated with decreased or increased expression of functional XMAD. The Crohn's disease, diabetes allergies, anaemia, asthma dermatitis agonist

                                                                                                                                                                                                                                                                                                                                                                                                             anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antitirlammatory; antibacterial; antiviral; antidingal; antithromatic; antithryoid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, oseteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune discussions and communications and communications are considered and communications.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 96
```

The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain prosuperfamily of extracellular matrix (ECM) proteins. WARP is used as

-domain protein
 is used as a

The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is mouse VA domain

                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to Willebrand Factor A domain related-protein (MARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is mouse WARP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated Willebrand Factor A-Related Protein polypeptide useful the manufacture of a medicament in the treatment of a disease condit of the extracellular matrix, in particular arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 415
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disulfide-bond Modified-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 13; Page 74-75; 103pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                      Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq length: 0 seq length: 2000000000
